SaaS CRM — Sales & Reseller Guide

Audience: Anyone selling this platform to a prospective business — resellers, sales staff, partners.

Use this to understand what you're selling, who to pitch it to, and how to answer the questions prospects actually ask.

---

1. The 30-Second Pitch

> "One CRM that adapts to your business — whether you sell products, manufacture goods, or run a service business, it's the same platform, and you only pay for the pieces you actually use."

Most CRMs are built for one kind of business and force everyone else to make do. This platform ships **three business models in one codebase** — a general sales CRM core, a full Manufacturing/Purchasing suite, and a complete Service-Business suite (subscriptions, bookings, time billing, helpdesk) — switched on or off per customer through their plan. A gym, an IT AMC company, a coaching institute, and a small manufacturer can all run on the same platform without any of them seeing features irrelevant to them.

---

2. Who To Sell This To

Business type	What sells it to them
Any B2B/B2C sales team	Leads, Deals pipeline, Quotations with e-sign, Invoicing, WhatsApp/Email outreach — the core CRM every business needs, regardless of vertical.
Manufacturers / traders / distributors	Purchase Requests → Purchase Orders → stock receiving → Work Orders → finished goods, vendor quote comparison, low-stock alerts, batch/lot tracking.
Gyms & fitness studios	Membership (Subscription) tracking with automatic expiry reminders, class/session booking.
IT AMC / support / consultancies	Contract (Subscription) tracking, a public Helpdesk with automatic ticket numbers and SLA alerts, billable Time Tracking converted straight to invoices.
Coaching institutes / clinics / salons	Public online Appointment booking (no app download, just a link), automatic reminders and no-show tracking, service packages/bundles.
Agencies / freelancers who bill by the hour	Time Tracking with billable/non-billable flags, one-click "convert logged hours to an invoice."

The common thread across every service-business prospect: **they're currently doing subscription tracking, booking, or support in spreadsheets/WhatsApp/paper — and losing renewals, no-shows, and complaints to that gap.**

---

3. Who To Target First — Ranked

The strongest reason a small business buys this platform is **WhatsApp messaging that does itself** — bulk offers, plus automatic reminders for renewals, appointments and fees. So the ranking below is by how well a prospect fits that, using four tests:

1. They already hold a customer or enquiry list with phone numbers.
2. They have a *recurring* reason to message that list (renewals, appointments, fees, offers).
3. The owner decides alone, so the sale is quick.
4. The plan price is easy to justify against what they lose today.

This ranking is a judgement based on product fit, not measured conversion data. Adjust it as real results come in.

Tier 1 — pitch these first

Rank	Prospect	What they would bulk-message	Plan to pitch	Why it sells
1	**Gyms, yoga, dance and sports academies**	Membership-expiry reminders, renewal offers, festival offers, batch or timing changes	**Pro** (₹23,999/yr)	Membership tracking with automatic expiry reminders is built in. The member list already exists and the owner decides alone.
2	**Coaching, tuition, skill and computer institutes, playschools**	Fee-due reminders, batch and holiday notices to parents, admission-season messages to old enquiries	**Starter** (₹15,000/yr) or Pro	Enquiries from Meta Ads, JustDial and Sulekha land in the CRM automatically. Demo-class booking works by link, and invoices track part-payments and overdue fees.
3	**Salons, spas, dental, skin and physio clinics**	Appointment reminders, no-show follow-up, "haven't visited in 60 days" win-back, festival and birthday offers	**Pro** for booking; **Business** for loyalty and win-back campaigns	Repeat-visit businesses. No-shows are tracked automatically and the booking link needs no app.

Rank	Prospect	What they would bulk-message	Plan to pitch	Why it sells
4	**AC, RO, solar, CCTV and IT service / AMC companies**	AMC-renewal reminders, service-due messages, ticket updates	**Pro**	They already buy leads from JustDial, IndiaMART and Sulekha, which import automatically. An AMC is a subscription, and the helpdesk raises SLA alerts.

Tier 2 — good fit, a little more effort

Rank	Prospect	What they would bulk-message	Plan to pitch	Why it sells — and the catch
5	**Insurance, loan and mutual-fund agents; education and immigration consultants**	Renewal and document reminders, lead follow-ups	**Starter**; Pro if they want renewal tracking	Renewal dates are their whole business. Tracking renewals needs the Subscriptions module (Pro).
6	**Real estate brokers and builders**	Project-launch and site-visit invitations to past enquiries, instant WhatsApp follow-up on every new ad lead	**Starter** or Pro	Plenty of leads from Meta Ads and follow-up speed decides deals. Lead quality varies, so expect more churn.
7	**Traders, distributors, wholesalers and small manufacturers (IndiaMART / TradeIndia sellers)**	Price lists, new-stock and scheme messages to their dealer list, quotation and payment reminders	**Business** (₹49,999/yr)	The biggest ticket: leads, quotation e-sign, GST invoicing, purchasing, stock and production in one place. Longer decision, and it competes with accounting software.
8	**Multi-outlet retail and food (cafe or bakery chains, jewellers, opticians, mobile shops)**	Loyalty points and wallet balance, birthday and anniversary rewards, win-back offers	**Business**	Loyalty plus the customer wallet is the hook. A single small shop rarely pays Business pricing, so aim at chains and multi-outlet owners.

Don't chase these for now

- **Cold-list blasters** — anyone who wants to message numbers that never opted in. Messages go through the official WhatsApp Business API, which needs opt-in; their number can get blocked.
- **Categories WhatsApp prohibits** — gambling, crypto, MLM, adult.
- **Banks, NBFCs, hospital chains and other large enterprises** — long procurement and compliance. Take them only if they come to us, through *Talk to sales*.
- **Very small single-owner shops** (a lone kirana, for example) — the budget isn't there.
- **Anyone who needs one-click blasts to tens of thousands of contacts** — see §9.

How to open the conversation

Ask three questions, and let the answers pick the pitch:

1. "How do you remind customers about renewals, appointments or fees today?"
2. "How many customers or enquiries have you got phone numbers for?"
3. "Who sends those messages — you, from your own phone?"

A prospect who answers "me, from my phone, one by one" is a ready buyer.

---

4. What To Sell To Each Industry

Same order as the ranking in §3. For each industry you get what to lead with, what to demo, and what **not** to promise. Sell the two or three features that fix *their* problem — do not tour the product. Rehearse every demo on a WhatsApp-connected number before the meeting.

Quick map — ● lead with this, ○ optional extra, blank = skip.

Industry	Bulk WhatsApp	Auto reminders	Lead capture	Booking link	Quote + GST invoice	AMC + helpdesk	Loyalty + wallet	Purchasing + production
1. Gyms & fitness	●	●	●	○	○		○	
2. Coaching & institutes	●	○	●	●	●			
3. Salons & clinics	●	●	○	●	○		●	
4. AC / RO / solar / IT service	●	●	●		●	●		○

Industry	Bulk WhatsApp	Auto reminders	Lead capture	Booking link	Quote + GST invoice	AMC + helpdesk	Loyalty + wallet	Purchasing + production
5. Insurance & consultants	●	●	●	○	○			
6. Real estate	●		●	●	●			
7. Traders & manufacturers	●		●		●			●
8. Multi-outlet retail & food	●	○			○		●	

1. Gyms, yoga, dance and sports academies

Their problem today: Renewals live in a register or Excel, so members lapse unnoticed. Enquiries from Instagram and Meta ads sit unanswered for hours.

Opening line: "How do you know a membership is about to expire — and who tells the member?"

Sell this:

- **Service Subscriptions** (Pro) — one record per membership with start and expiry, automatic expiry reminders by email and WhatsApp in the owner's own wording, one-click or bulk renewal, and optional auto-renew that raises a draft invoice.
- **Bulk WhatsApp** — festival offers, new-batch announcements and "bring a friend" campaigns to the whole member list.
- **Lead capture** — Meta and Instagram Lead Ads enquiries arrive in the CRM, are auto-assigned to the least-busy staff member and set follow-up reminders.
- **Appointments** — trial-session and class booking by link.
- **Invoices** — GST invoices with part-payment tracking for fee instalments.

Demo in 10 minutes: import the member list from Excel → add a membership plan → show the expiry reminder → send one bulk offer to ten members.

Don't promise: automatic card or UPI charging of members, entry-gate or biometric check-in, trainer-wise scheduling.

2. Coaching, tuition, skill and computer institutes, playschools

Their problem today: Ad and JustDial enquiries get one or two calls and go cold. Fee follow-up is by phone and parents are messaged one by one.

Opening line: "Of the people who enquired last admission season, how many did you follow up after the first week?"

Sell this:

- **Lead capture** — Meta Ads, JustDial and Sulekha enquiries land in one list, are auto-assigned, and raise an alert if nobody contacts them in time.
- **Appointments** — demo-class or counselling booking by link, with reminders and no-show tracking.
- **Bulk WhatsApp** — batch-timing and holiday notices to parents, fee-due messages, results, and an admission offer to old enquiries with the brochure or fee structure attached (PDF or image, up to 16 MB).
- **Invoices** — fee instalments as part-payments; overdue alerts go to the staff member who raised the invoice.
- **Service Subscriptions** (Pro) — track each course term with expiry reminders.

Demo in 10 minutes: import the enquiry list → send an admission message with the brochure → book a demo class through the link on your own phone.

Don't promise: a school ERP — there is no timetable, student attendance, exam or report-card module. Invoice overdue alerts go to staff, not to parents, so fee reminders to parents go out as bulk WhatsApp messages.

3. Salons, spas, dental, skin and physio clinics

Their problem today: No-shows leave empty slots, customers come once and never return, and booking is a WhatsApp back-and-forth.

Opening line: "How many bookings last month didn't turn up, and how many customers haven't been back in 60 days?"

Sell this:

- **Appointments** — public booking link with no app, business hours, capacity per slot, automatic reminders a day ahead and on the day, and no-shows marked automatically.
- **Service catalog with packages** (Pro) — bundled services priced as one package.
- **Customer Loyalty** (Business) — points or stamps, tiers, birthday and anniversary rewards, and a win-back campaign aimed at customers who haven't visited in N days.
- **Bulk WhatsApp** — festival and seasonal offers.
- **Invoices** — GST invoices.

Demo in 10 minutes: set up the booking link → book a test slot from your phone → show the reminder → create a "not visited in 60 days" win-back campaign (Business plan).

Don't promise: a calendar per stylist or doctor (slots are capacity-based), or clinic medical records, prescriptions and lab reports.

4. AC, RO, solar, CCTV and IT service / AMC companies

Their problem today: AMC renewals are remembered by one person, bought leads are called late, and complaints get lost between calls and WhatsApp.

Opening line: "When an AMC is about to end, who calls the customer — and how do you know they did?"

Sell this:

- **Lead sources** — JustDial, IndiaMART, Sulekha and Meta leads import into one inbox, auto-assigned, with an alert when a lead isn't contacted in time.
- **Quotations and invoices** — e-sign quotation link, then a GST invoice.
- **Service Subscriptions** (Pro) — each AMC as a contract with expiry reminders, renewal and a draft renewal invoice.
- **Tickets / Helpdesk** — public complaint form, automatic ticket number, instant confirmation, SLA breach alerts.
- **Time Tracking** — bill visit hours straight to an invoice.
- **Bulk WhatsApp** — seasonal offers such as "service your AC before summer".

Demo in 10 minutes: raise a ticket through the public form on the prospect's own phone → show the confirmation and the SLA alert.

Don't promise: technician dispatch, route planning, GPS tracking or per-technician scheduling.

5. Insurance, loan and mutual-fund agents; education and immigration consultants

Their problem today: Policy renewals, document follow-ups and open cases are in notebooks and chat history.

Opening line: "How do you know which clients' renewals fall next month?"

Sell this:

- **Contacts with custom fields** — policy number, premium, renewal date, course or country. Fields are self-service, no developer needed.
- **Service Subscriptions** (Pro) — used as a renewal tracker with reminders.
- **Task templates and checklists** — a repeatable document-collection checklist for every new case.
- **Deals pipeline and follow-ups** — kanban of open cases with reminders.
- **Lead capture and Bulk WhatsApp** — Meta Lead Ads in, renewal notices and greetings out.

Demo in 10 minutes: import a client list → add a renewal → show the reminder and the document checklist.

Don't promise: insurer, bank or university integrations, or premium calculators. Policy data is entered or imported by the agent.

6. Real estate brokers and builders

Their problem today: Ad leads wait hours for the first call, site visits are arranged over chat, and old enquiries are never re-pitched.

Opening line: "How fast does a new Facebook lead get its first call — and who checks?"

Sell this:

- **Lead capture** — Meta and Instagram Lead Ads, auto-assigned to the least-busy salesperson, scored, with an alert if the lead isn't contacted.
- **Follow-ups and call log** — every call and next step recorded against the lead.
- **Deals pipeline** — enquiry → site visit → negotiation → booking on a kanban board.
- **Appointments** — site-visit booking by link.
- **Quotations** — offer letters with an e-sign link.
- **Bulk WhatsApp** — a project-launch message with the brochure attached to every past enquiry. Keyword-triggered chatbot replies handle the common questions.

Demo in 10 minutes: show a test lead arriving → auto-assigned → follow-up reminder → site-visit booking link.

Don't promise: property or unit inventory management, or lead feeds from portals such as 99acres or MagicBricks — those are not among the supported sources.

7. Traders, distributors, wholesalers and small manufacturers

Their problem today: IndiaMART enquiries are answered late, quotations are Word or Excel files, dealers are messaged one by one, and stock and purchases sit in separate sheets.

Opening line: "How many IndiaMART enquiries did you get last month, and how many became orders?"

Sell this:

- **Lead sources** — IndiaMART (synced every 30 minutes), TradeIndia and JustDial leads arrive automatically.
- **Quotation → GST invoice** — e-sign quotation link with versions, then an invoice with CGST/SGST/IGST split and part-payment tracking.
- **Bulk WhatsApp to the dealer list** — price list, new stock and scheme messages with a PDF attached.
- **Stock** — product catalog with low-stock alerts and batch or expiry tracking.

- **Purchasing** — Purchase Request → Approval → Purchase Order → Receive → Stock, with vendor quote comparison.
- **Manufacturing** (Business) — work orders with BOM costing and production stages.

Demo in 10 minutes: an IndiaMART lead → quotation → GST invoice → purchase request for a low-stock item.

Don't promise: full accounting. Position it next to Tally or the accounting package, not instead of it — there are no ledgers or books of account.

8. Multi-outlet retail and food (cafe and bakery chains, jewellers, opticians, mobile shops)

Their problem today: Customers visit and vanish, many won't give a phone number, and offers go to no one in particular.

Opening line: "Of your customers last month, how many came back — and could you message them today?"

Sell this:

- **Customer Loyalty** (Business) — points or stamps, tiers, and earn and redeem rules set by the owner.
- **QR kit** — the customer scans a QR and sends JOIN on WhatsApp, is enrolled instantly with a welcome bonus and fills no form. This answers "customers won't give their number".
- **Counter lookup** — the cashier types the phone number and sees points and tier.
- **Customer Wallet** — one login shows the customer's points across every participating shop.
- **Targeted campaigns** — high spenders, frequent visitors, inactive customers, a tier, or a product category, plus birthday and anniversary rewards and points-expiry reminders.

Demo in 10 minutes: print a QR → scan it from your phone → show the welcome bonus → look the customer up at the counter.

Don't promise: a POS, billing hardware or table and kitchen orders. The wallet only shows shops that are on the platform.

---

5. Feature Highlights (by category)

Sales & CRM Core — Leads (with automatic capture from Facebook/Instagram Lead Ads, IndiaMART, JustDial, TradeIndia, Sulekha), Contacts, Deal pipeline with kanban/funnel analytics, Tasks & Follow-ups, Calendar, Quotations with a **customer-facing e-sign link (no login required)**, Invoicing with partial-payment tracking and branded PDFs, duplicate detection & merge.

Manufacturing & Purchasing — Product catalog with low-stock alerts, vendor quote comparison, the full Purchase Request → Approval → Purchase Order → Receive → Stock workflow, Work Orders with per-job cost tracking (labor/machine/material), batch/lot traceability.

Service Business Suite — Service catalog with bundleable packages, customer Subscription tracking with **fully customizable automatic Email/WhatsApp expiry reminders**, **public online Appointment booking** (shareable link, configurable business hours & capacity, automatic customer reminders and automatic no-show detection), Time Tracking that converts straight into invoices, a Ticket/Helpdesk system with a **public submission form, auto-generated ticket numbers, automatic confirmation messages, and SLA breach alerts** so nothing falls through the cracks.

Customer Loyalty & Wallet (Business plan) — Points and stamps, tiers, rewards, and targeted offer campaigns aimed at a segment (high spenders, frequent visitors, inactive customers, a tier, or hand-picked contacts), plus birthday and anniversary rewards. The Customer Portal gives each customer one login to see their points across every shop they visit, with QR redemption at the counter.

Communication — Email and WhatsApp (send, bulk-send, templates, full logs; bring-your-own SMTP), a WhatsApp chatbot flow builder, a **WhatsApp Team Inbox** (Pro and above — the whole team answers customer chats from one number, with chat assignment, optional auto-assign, `/` quick replies, private team notes, a Team Performance report and a Campaigns results page; details in the *WhatsApp Team Inbox* section below), Instagram comment/DM automation, Slack alerts for the team.

Automation & Reliability — SLA breach detection (leads and tickets), automatic reminders (follow-ups, tasks, invoices, subscriptions, appointments), automatic no-show handling — the platform proactively surfaces what needs attention instead of making staff remember to check.

Reports & Insights — Dashboards and dedicated report tabs for Overview, Deals, Revenue, Staff performance, and — when active — Subscriptions, Appointments, Tickets, and Time Tracking.

Access Control & Security — Role-based permissions out of the box (Admin/Staff), fully customizable roles for anything more granular, per-module access control, audit logs.

Integrations — A versioned REST API with tenant-issued API keys, outgoing webhooks for connecting to tools like Zapier/n8n, and (as a white-glove option) a request-based custom automation service — the platform team builds bespoke workflow automations on request.

5a. WhatsApp Team Inbox (Pro and above)

One-line pitch: "Your whole team answers customers from one WhatsApp number — nobody shares a phone, nothing gets missed, and you can see who is replying fast."

What the customer gets

- **Shared inbox** — every customer message lands in one place, with unread badges, search, and Open / Mine / Unassigned / Unread / Resolved tabs. Replies can include a photo, PDF or document.
- **Assign chats** — hand a chat to a teammate; optional **auto-assign** shares new chats between chosen people in turn (off until the owner switches it on). A returning customer stays with the same person.
- **Quick replies** — type `/` and pick a saved answer (price, address, thanks); the customer's name is filled in automatically.
- **Private notes** — internal notes inside the chat that the customer never sees.
- **Team Performance** (owner) — average first-reply time, chats answered, chats still waiting, and per-teammate numbers.
- **Campaigns** — every bulk send with delivered / failed counts, why messages failed, and how many people replied within 3 days. Bulk Send can also be narrowed by lead status and source.
- **Consent & safety** — a customer can reply **STOP** to opt out of broadcasts (and **START** to return); opted-out numbers are skipped automatically in every bulk send.
- **No lost leads** — a first WhatsApp message from a new number automatically becomes a Lead (source WhatsApp) and is linked to the chat.
- **Scheduled campaigns** — write a bulk message now, choose the date and time, and it goes out by itself; it can be cancelled until then.
- **Control** — owners decide per role who sees every chat, who can assign, who can manage quick replies and who sees reports.

Who to sell it to: any customer who already runs enquiries on WhatsApp with more than one person answering — real estate, coaching, clinics, salons, AMC / service companies.

How it is sold: it is a premium module. It is included from **Pro** upward by default, and the platform team can also switch it on for a single customer on a lower plan as an add-on (Tenants → Modules), or off again, at any time.

3-minute demo: send a message from your phone → show it arrive with the unread badge → assign it → reply with a `/quick reply` → add a private note → open Team Performance and a finished Campaign → mark resolved.

Don't promise: product catalogs, recurring scheduled sends, an opt-out list page, tag-based segments (leads have no tags yet), a separate "read" count in campaigns, re-sending to failed numbers from the campaign page. "Delivered" is shown only for numbers linked through the WhatsApp gateway.

Objections: "*Can two people reply at once?*" — yes, both see new messages within seconds and each reply carries the sender's name. "*Can staff see each other's chats?*" — by default yes; the owner can limit a role to its own and unassigned chats. "*What if the chatbot is on?*" — it still answers its keywords; staff can reply on top.

Step-by-step guide for the customer's team: `docs/whatsapp-team-inbox.md`.

---

6. How Plans & Pricing Work

Every customer subscribes to a **Plan**. Each plan defines:

- The number of team members (a fixed seat count). Leads and contacts are **always unlimited** — there is no lead cap on any plan.
- Which optional modules are switched on: WhatsApp, Advanced Reports, Social Media Leads, Third-party Lead Sources, Manufacturing, Service Catalog, Subscriptions, Appointments/Booking, Time Tracking, Tickets/Helpdesk, Customer Loyalty, Customer Portal.
- Monthly or yearly pricing (with an automatic discount for annual commitment).

The five standard plans are **Free**, **Starter** (₹15,000/yr), **Pro** (₹23,999/yr), **Business** (₹49,999/yr) and **Enterprise**. The paid plans start with a 14-day free trial. These are the standard list prices — check the live Pricing page before quoting, because the platform team can change them.

WhatsApp campaigns are not on the Free plan. They start at Starter, so a prospect who wants bulk messaging cannot stay on Free.

Enterprise is a *custom* plan: it carries no fixed price and no self-serve checkout — the pricing page shows "Custom" and a **Talk to sales** button that opens the public `/contact-sales` form. Those enquiries land in **Super Admin → Sales Enquiries** (and are emailed to the address set there).

This means you can position plans by vertical, not just by size:

- A "Starter" plan with just the CRM core suits anyone getting started.
- A "Service Pro" plan adds Subscriptions + Appointments + Time Tracking + Tickets for service businesses.
- A "Manufacturing" plan adds the Purchasing/Work Order suite.
- Individual customers can also get one-off module overrides from the platform side if they need something outside their plan temporarily (e.g. a trial of Tickets before upgrading) — a flexible upsell lever.

Coupons/discount codes are also supported for promotions.

---

7. Sample Talk Tracks

Gym owner: "*Right now, how do you know when someone's membership is about to expire? ... Yeah, most gyms find out when the member just stops showing up. This sends the member an email — and a WhatsApp where that number is set up for it — automatically, days before it lapses, in whatever wording you want — and you can renew them in one click when they come back in.*"

IT AMC / support company: "*When a client emails you a problem today, does it get lost in someone's inbox? Here, every complaint gets a ticket number automatically, the client gets an instant confirmation, and if nobody's replied within your SLA window, your team gets alerted automatically — before the client has to chase you.*"

Coaching institute / clinic: "*You can send parents/patients a link — no app, no login — and they book their own slot based on your real availability. No back-and-forth on WhatsApp. And if someone books but never shows up, it's tracked automatically so you have real attendance data.*"

Small manufacturer: "*From the moment your team says 'we're low on this' to the finished product going into stock — request, approval, purchase order, receiving, and the production job itself — it's one connected trail, not five different spreadsheets that never agree with each other.*"

---

8. Objection Handling

- **"We already use WhatsApp/Excel for this."** — That's exactly the gap: nothing reminds itself, nothing tracks itself, and nothing survives someone leaving the team. This platform's whole value is doing the remembering and reminding automatically.
- **"Is it only for [gym / manufacturing / IT]?"** — No — it's one platform, and you only turn on (and pay for) the modules relevant to your business. A trading company, a service business, and a mixed business (sells products *and* offers services) can all run on it.
- **"Can our customers use it without installing anything?"** — Yes. Quotation approval, appointment booking, and support ticket submission are all link-based, no login, no app — this is a deliberate design choice, not a limitation.
- **"What if we need something custom?"** — Two paths: (1) custom fields and custom roles are self-service, no developer needed; (2) for a bespoke automated workflow, there's a request-based automation service where the platform team builds it for you.
- **"Can we control who on our team sees what?"** — Yes, granular role-based permissions, fully customizable per tenant.

---

9. What NOT To Oversell

Be accurate — a prospect who's disappointed after signing is worse than a slower close:

- "AI Automation" in the product is a **request form for a custom build**, not a drag-and-drop automation builder they can use themselves the moment they sign up.
- A customer login exists only as the **Customer Portal / Wallet** (loyalty points and stamps across shops, Business plan). Everything else customer-facing — a quotation, an appointment, a ticket — is a link per record, not a dashboard where the customer sees all of their history.

- Subscription renewal needs a staff member to click "Renew" after the reminder goes out, unless that subscription is set to auto-renew. Auto-renew extends the term and creates a draft invoice; it does not collect the payment, so it is not a recurring billing engine for the tenant's *own* customers.
- Appointments are capacity-based (X people per slot), not "book a specific staff member" — if a prospect specifically needs per-technician scheduling, flag it rather than promise it.

Bulk WhatsApp — say these out loud before the prospect assumes otherwise:

- **It is not a cold-list blaster.** Messages go through the official WhatsApp Business API, to people who have opted in — existing customers and people who enquired. Sending to bought or scraped lists risks the prospect's number being blocked.
- **Approved templates.** A message to someone who hasn't messaged the business in the last 24 hours generally has to be a WhatsApp-approved template. Before you promise a campaign, confirm with the platform team which WhatsApp connection the prospect will be on and whether approved templates are available on it.
- **Automatic WhatsApp reminders.** Subscription-expiry and appointment reminders currently go out as plain WhatsApp text, not as approved templates, so WhatsApp may not deliver them to a customer who hasn't messaged the business recently. Email reminders are not affected. Test on a real number before you promise WhatsApp reminders in a demo or a quote.
- **Size.** Bulk send is built for lists of hundreds, not tens of thousands. For more than about a thousand recipients in one send, check with the platform team first.
- **Choosing recipients.** The bulk screen lists leads or contacts to tick, with a search box. Targeting by behaviour — spend, visits, inactive for N days, tier — belongs to Loyalty campaigns, which are on the Business plan.
- **Message charges.** Confirm how WhatsApp message charges are billed before quoting, and never describe messaging as "unlimited and free".

---

10. Closing Checklist

1. Identify the prospect's business type → find it in the ranking in §3 and map to the relevant feature set.
2. Identify their current pain (spreadsheets, missed renewals, lost complaints, no visibility into stock) → tie it directly to the automation that solves it.
3. Recommend a plan tier that matches which modules they actually need — don't oversell modules they won't use.
4. Offer a walkthrough of the one or two features that matter most to them, not a tour of everything.
5. Set expectations correctly using §9 above.
